ANCHOR WALL HOOK

Hand crafted architectural hardware designed to enhance the sensory experience and small details of interior spaces. The collection includes a range of handmade ceramic hooks in three surface glaze options.

Suitable for both interior and exterior applications, the robust wall hooks are available in three heights and three different glaze finishes. All pieces are supplied with stainless steel fixings, powder coated to colour match the glaze finish.

THANK YOU!

Thanks for inquiring about a product from our handmade architectural hardware range. Our products are designed, produced, assembled and packaged in Melbourne, Australia, often with support and services from other local businesses. Your ongoing support helps to keep small scale design and production based businesses like Anchor alive and well in Australia.

124mm height approx.

15420 Large Wall Hook
155mm height approx.

ON THE HANDMADE

Our products are handmade - really handmade. We extrude the clay by hand, cut and shape each piece by hand, load and unload the kiln by hand, and glaze by hand. Whilst we seek excellence in every sense of the word, the handmade framework we operate within results in a finished product with inherent fluctuations in size, finish and colour. We believe this gives each item a subtle richness that is only achievable through this kind of intensive making process.

WEAR AND TEAR

Our products are made with a stoneware clay body that is high fired to 1280 degrees C. This high firing process makes for a product that is strong, vitreous and robust. It is however, important to remember that ceramic will chip or crack if knocked firmly enough with another hard item. Clean with warm soapy water and a soft cloth to maintain the glaze finish.

FIXING AND FITTINGS

Wall hooks are supplied with two stainless steel screws, the heads of which are powder coated to integrate with the glaze finish of the ceramic. As the name suggests, powder coating is a process that applies a coating of paint colour to the surface of a metallic item.

Whilst this process provides a robust surface coating, it can be prone to chipping and scratching so be mindful of this and protect the powder coated surface when fixing the screws.

Screw spec: 6G 1 1/2" Pan head / Phillips slot 304 grade stainless steel. Powder coated head.

Wall hooks are designed to be installed vertically with the body of the hook pointing up and down. This ensures that the weight of the item being hung is directed down and along the longest length of the fitting. A horizontal installation will place undue pressure on the hook and, depending on the weight of the item being hung, may cause the hook to break. In the same context, be mindful with the amount of weight applied to the wall hooks and do not over tighten the screws when fixing to the wall.

Ensure the wall hooks are attached to a wall or material with adequate capacity to support both the weight of the hook and the items you intend to hang. If in doubt, seek professional trade advice to help with your installation.

TO ORDER

hello@anchorceramics.com or +61 413 456 981

Please specify the height and glaze finish when ordering. Generally wall hooks can be dispatched on a 3-4 week lead time. Larger orders may require longer lead times.
