Light source and sound barrier in one

“We needed a flexible light source and sound absorbent above our conference table as the studio is open-plan and with a very high ceiling”, says the designgroup Form Us With Love.

Hood is an ideal solution for these open plan environments, functioning both as a light source and a sound barrier, helping to create a more intimate space in the contemporary office landscape. Its modular structure means that Hood can grow according to need. “It should be possible to expand Hood in all directions really”, says Form Us With Love.
